

## Alternative Replacement Clutch Design To Fit In Place Of Self Adjusting Types

CLTB 0018

The alternative design clutch kits below have been developed to replace the original self adjusting types above. Although these clutches are different in design, they will fit perfectly in place of the original ones. This has been achieved by using re-designed clutch cover assemblies and driven plates which are fitted with superior low level wear facing material. This gives improved service life which reduces the normal increase in pedal load, thus consequently reducing the requirement for the clutch to be a self adjusting type.
