

## Cables

# Vauxhall Vivaro, Renault Traffic & Nissan Primastar SWB Models

CATB 0004

First Line the well known and respected aftermarket distributor introduces **FKB3252** to its market leading cable range as a modified Brake cable application for the Vauxhall Vivaro, Renault Traffic & Nissan Primastar.

MY 2006 - 2008 With a newly modified fixing to alleviate the problem of the front to intermediate cable fixing breaking, this is in line with the O.E conversion kit supplied by the manufacturers.

As is usual with First Line these cables are in stock ready for you to order.

The cable catalogue lists an extensive range of Brake, clutch Speedo, and accelerator cables. With a total of 2450 part numbers covering the majority of the UK vehicle car parc you can be sure that you will receive an OE quality part which matches the existing cable on the car.

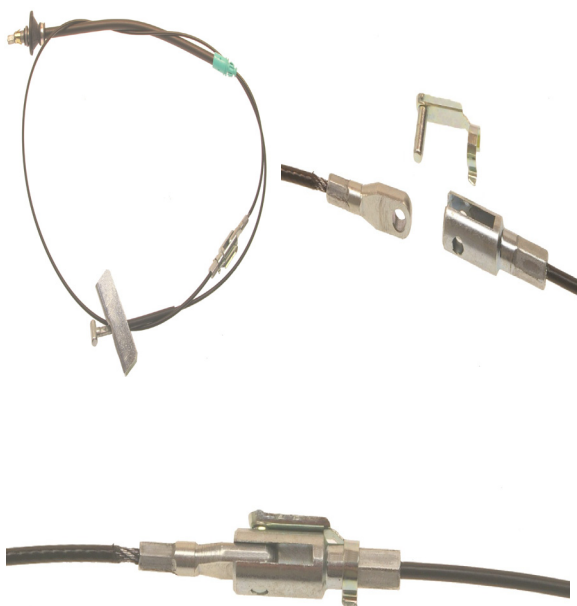

The replacement cable is supplied with all necessary fittings to allow correct routing of the cable.

This is important as an incorrectly routed or fitted cable will not perform correctly and could lead to an accident.

When fitting any cable be sure to check prior that the cable moves freely inside the housing.

Lastly under no circumstances grip the inner cable with pliers or vice grips when fitting it.

This could lead to damage of the cable and compromise its operation and service life.
