

## **Audi A4 / A6 Type 8E / 8H / 4B**

### **Radiator fan without function, increased engine temperature.**

If there are complaints with these vehicles that the radiator fan is not working and the engine becomes too hot, one possible cause is a faulty control unit for the radiator fan. To eliminate the fault the control unit has to be checked. This fault affects control units produced **up to** August 2002. The date of manufacture can be found on the label on the control unit. Faulty control units must be replaced by a modified version with a more recent date of manufacture.

Date of manufacture  
(Year 01 / Day 92)
