

Audi A6 (4B..) All models From model year 1997

**Failure of the interior lighting and/or
the electric window winders.
Unlocking/locking of a door is
sporadically not possible.**

If there are complaints about the above-mentioned faults with these vehicles, one possible cause is the central locking control unit. Various relays are installed in this control unit. Faults in individual relays lead to the above-mentioned failures. To eliminate the fault, the central locking control unit must be replaced.
