

Technical Information

Brake cleaner Note on storage

General

Brake cleaner binds brake dust and reliably removes oil, grease and dirt without leaving any residue. As such, this tried and tested cleaning agent is used almost universally for all types of work in garages. The following conditions for correct storage of it must always be observed.

Storage conditions

As HELLA PAGID brake cleaner is sold in compressed gas packages, the following storage conditions are recommended:

- Keep containers tightly sealed.
- Keep containers in a cool, well-ventilated location.
- Keep away from heat, sparks, naked flames and hot surfaces.
- Protect from sunlight and temperatures higher than 50°C. Heating of the brake cleaner will lead to excess pressure and a risk of explosion.
- Even after use, do not force open or burn.
- Equip storage rooms with solvent-resistant sealed floors.

Recommended storage temperature: 20°C

Please observe the relevant specifications on the corresponding safety data sheet and the official regulations on the storage of compressed gas packages.
