

Chrysler Grand Cherokee I+II (Z+WJ)

Changed quantities of refrigerant and oil

The prescribed quantity of refrigerant and oil for the Grand Cherokee (all models) was reduced from the date of manufacture 16.09.1998 (from chassis no. MDH0916XX) onwards. In order to achieve a better cooling performance, these vehicles are now only being filled with 680 g (previously 730 g) refrigerant and 170 ml compressor oil (previously 220 ml) before they leave the factory. Daimler Chrysler recommends using the reduced quantities for vehicles built before 16.09.1998 also following repairs or maintenance. This should be recorded using a Service label.
