

## Starters with flange seal

Starters fitted to vehicles from the Ford Mondeo III and Transit series are sealed at the flange by means of a cellular rubber seal. The seal closes the gap between the straight starter flange and the curved bell housing and prevents dirt and dust penetrating from the outside.

The replacement unit from Hella 8EA 737 919-001 is supplied with a self-adhesive cellular rubber seal enclosed as a loose part.

Seal

**Important:** Before assembly, the seal must always be glued to the flange surface.
