

## **SUZUKI**

### **Grand Vitara (JT)**

### **Year of manufacture: 2005 to 2008**

### **Buzzing/vibrating noises from the dashboard**

#### **Problem:**

Various buzzing/vibrating noises coming from the area of the dashboard.

The noises often depend on the engine speed (approx. 1500 min<sup>-1</sup>) or occur over uneven road surfaces. Moreover, the noise can disappear depending on the position of the ventilation flaps.

#### **Cause:**

Too much "play" in the heating/air conditioning systems - could be due to the ventilation flaps.

#### **Solution to the problem:**

Applying foam strips can help to remedy the problem. For further corrective measures and/or information, please consult a Suzuki authorised dealer.
