Year of manufacture:
May 2006 - January 2007
Engine: all 4 cylinder petrol engines***

**Radiator fan module / Coolant
temperature**

Problem:

Water gets into the radiator fan module. This can lead to a short circuit and breakdown of the module. In the extreme case, there is danger of fire.

Steps taken:

The vehicle manufacturer has already taken up the problem and has notified the owners of the affected vehicles. Nevertheless, one may assume that for various reasons not all vehicles have been checked and repaired.

Remedy:

As part of the review, determine which radiator fan module is installed. A service kit will be installed on affected modules. This contains a protective cap for the control model and an additional cable tree.

Important notice:

Please take this information into account when there are complaints about the ventilator fan or the coolant temperature.
