

VW-Golf 3

Receiver-drier change

On most models the drier is located below the right headlight, behind the bumper (picture 1).

Replacment should proceed as follows:

1. Remove air filter case completely (depending on engine).
2. Remove the bumper baffle or additional headlight on the right (depending on extras). From this point (picture 2) the further points can be carried out.
3. Remove the pipes from the drier. Seal the pipe ends.
4. Disconnect the pressure switch plug.
5. Remove the mounting nuts (2x) below the actuator for the headlight levelling (pic. 3).
6. Remove the drier from the under side of the car.
7. Compare the old and the new part with each other.
8. The pressure switch may need to be modified.
9. Clean the pipe thread and check for damage.
10. Put compressor oil on the new O-rings and the thread.
11. Remove seal stoppers only just before fitting the pipework.
