

## Clutch friction plate design change on Ford models

Please note for the clutch kits listed below there has been a modification made by Ford. The clutch friction plate has now been reduced from 220mm to 210mm making it 10mm smaller than the clutch cover. This will in no way effect the performance of the clutch.

**Clutch kits affected:** 821321, 826042, 826044, 826048, 826053, and 826493

*Please note the friction plate is 10mm smaller in diameter than the clutch cover*
