

Diaphragm fingers on a dismantled clutch

Part Number: 832014

For Vehicle: Peugeot, Citroen applications

Please note the diaphragm fingers of the clutch cover in Valeo kit 832014 are positioned at different heights in its pre fitment condition. This design is a feature of the technology imposed on the vehicle. The clutch cover is perfectly safe to fit and does not represent a manufacturing defect. (See fig1)

The diaphragm fingers align themselves once fitted to the flywheel, and in turn, this ensures the correct operation of the clutch.

It should also be noted the friction plate component of this clutch should be fitted with the extended cassette side facing towards the gearbox. This is indicated with the use of the 'German' word 'Getriebeseite' printed on the friction plate around the central hub. 'Getriebeseite' translates in 'English' to Gearbox side. (See fig2)

The fingers on the cover are positioned at different heights
